

Depth Readings on Your Phone — Crew Guide

1 · Set up your account (one time, 2 minutes)

1. Open the invite link your rink manager sent you, on your phone.
2. Tap **Register free** — enter your email and choose a password (8+ characters).
3. Done. You land inside your rink automatically.

2 · Open the rink on your phone

1. Go to **icewrightapp.com** in your phone's browser and log in.
2. On the Dashboard, tap your rink.

*Tip: tap **Add to phone...** next to the depth buttons to put Record Depth Readings on your home screen as its own app — one tap next time.*

3 · Enter drilled depth readings

1. Tap **Depth readings** in the Jump-to bar, then tap **Record Depth Readings**.
2. Check the top of the page: measuring = **Drill** · entry = **Keyboard** · points = your rink's usual layout · date = today (already filled). Add the time and your name if you like.
3. Tap **Start measuring**.
4. The diagram shows a **flashing orange dot** — that's your point. Drill there, measure, and type the depth on the keypad in your units (inches unless changed under Profile) — example: **1.25**.
5. Tap **Next** →. The dot turns green and moves on. Repeat around the rink.

Need to fix a number? Tap any dot on the diagram to jump back to it.

4 · Save

1. After the last point the big button changes to **Save all readings** — tap it.
2. Wait for ✓ **Saved ... readings** on screen. That means it's in.
3. If it says "No connection," your readings are safe on the phone — save again when you're back in coverage.

5 · Make a topograph

1. Go back to the rink page and scroll to **Generate topograph animation**.
2. Pick a style: **Topograph (contours)** = the map, no numbers · **Topograph + values** = map with the numbers · **Depth values at points** = numbers only.
3. **Just want today's chart?** Enter today's date in the **From** box. Leaving From/To blank animates the whole season instead.
4. Tap **Generate**. It appears under **Render history** when done.

6 · Send it to someone

1. In the Render history row, tap a share icon: **envelope** = email with the link filled in · **share arrow** = your phone's share menu (pick **Messages** to text it) · **link icon** = copies the link to paste anywhere.
2. Anyone with the link can watch it — no account needed.
